

## E-Learning guide

New to sustainable procurement? ISO 20400 provides essential guidance for those new to the profession or those wishing to advance their strategy. Before you buy the standard, you may want to try our [free self-assessment](#).

Simply register on our site and click “Take the self-assessment” and off you go. By answering 20 simple questions you can get some idea of how your procurement practice benchmarks against the standard.

### E-Learning module

However, even the simplified self-assessment can appear a bit complex. Before you take this step you may want to try our [e-learning module](#) that takes you step by step through the standard. Click the image to take a free, 45 minute module.

## Supplier relationship management

**Question 10** asks you about engaging your stakeholders. Your suppliers will be among your most important stakeholders, so [Supplier Relationship Management](#) will be key to your strategy. Check out this e-learning module for some ideas on how to do it.

### Setting priorities

When you get to **Question 13**, you will find reference to “Setting priorities”, we call this [“Heat mapping”](#). This is an essential part of your strategy where you map your sustainability goals against your categories of supply. We also have an e-learning module on this, you may want to give it a try.

### Supplier performance management

**Questions 14 and 15** ask you about [Supplier Performance Measurement](#). Our e-learning module helps you to understand how to set goals, targets, indicators and metrics to hold your supply chain to account for their performance.

Thanks to the UK [Supply Chain Sustainability School](#) for allowing us to use these modules. We hope you enjoy them and get the best value from your self-assessment.
